

## ACRONIS BUSINESS RESILIENCE SYSTEM (BRS) QUICKSTART SERVICE

### FULL VM BACKUP AND REPLICATION TO BRS QUICKSTART

Acronis Cyber Protect Cloud’s Convert to VM functionality allows for full virtual machine backup and replication to a Business Resilience System (BRS). This innovation delivers easy, efficient, and reliable conversions for machines hosted on other hypervisors to be replicated into Scale Computing Platform, so they are ready to power on in the event they are needed.

With a Quickstart Session, our Scale Computing Engineer covers the basics of installation, configuration, and execution of powering on converted VMs. Licensing for the Acronis appliance is sold by Acronis directly.

What’s Included?	Delivery	Details
