ACRONIS QUICKSTART SERVICE

AGENTLESS VIRTUAL MACHINE BACKUP

Acronis Agentless Backup for Scale Computing Platform allows for full virtual machine backup and fast recovery for Scale Computing HyperCore clusters. This innovative backup software solution delivers easy, efficient, reliable, and secure protection for all data and applications in on-premises and remote systems, in private and public clouds, and on mobile devices.

This solution enables the import of virtual machines to the Acronis Management Server without having to install an agent on a virtual machine. SC//HyperCore integration handles the backup and restore of virtual machines, as well as agent-based configurations on Windows and Linux servers.

The Acronis Quickstart Service configures one Windows or Linux physical or virtual workload on a virtual machine running on SC//HyperCore. This is a kickstart for customers who plan to implement a backup strategy with other servers on SC//HyperCore to a secondary recovery location and want to ensure they understand how to use Acronis Agentless Backup software successfully to validate their backup solution.

What's Included?	Delivery	Details
Pre-Assessment • Initial discovery and planning	Remote Call	Language English Only
