

MIGRATE SERVICE

EXPEDITED TRANSITION TO SC//PLATFORM

Workload migration projects are a necessary part of any step up to newer and better IT infrastructure. A full migration project requires discovery, assessment, planning, and scheduling before migrations can even begin. Unfortunately, migration projects are often not a familiar part of most customers’ expertise, as they occur only once every few years.

At Scale Computing, our Engineers handle migrations and their assorted tasks every day. Ours is a team of experts when it comes to planning, preparing, and executing workload migration projects.

The Migrate Service is designed to help expedite your transition to Scale Computing Platform with a full-service migration solution for all of your existing physical or virtual workloads with minimal downtime or disruption. With this service, our SC//Engineer handles those complex tasks needed to migrate all of your workloads onto your Scale Computing HyperCore system. This leaves you the time to focus on your other strategic business projects.
