# QUICKSTART MIGRATION SERVICE

## MIGRATE WORKLOADS WITH MINIMAL DOWNTIME

Our most commonly asked question about Scale Computing Platform might be, "How do I move my workloads into the Scale Computing HyperCore environment?" There are a number of migration products and services on the market, but none is simpler or more tailored to SC//HyperCore than our Quickstart Migration Service.

Our Scale Computing Move Powered by Carbonite software solution migrates workloads with minimal downtime from any physical, virtual, or cloud platform onto the SC//HyperCore system. The Quickstart Migration Service provides training in using Scale Computing Move to migrate one workload to SC//HyperCore.

The Quickstart Migration Service migrates one Windows or Linux physical or virtual workload into a virtual machine running on SC//HyperCore. It is a kickstart for you as you plan to migrate all other servers to SC//HyperCore and want to ensure you understand how to use the Scale Computing Move software successfully.

| What's Included? | Delivery | Details |
|---|---|---|
| **Pre-Assessment**<br>• Initial discovery and migration planning<br>• Request at least one Scale Computing Move License 24 hours prior to the Quickstart Migration Service | Email | Language English Only |
