

Joint Solutions Brief

Scale Computing and Workspot: Combining HC3 hyperconvergence and VDI 2.0 is a no-brainer. Eliminating complexity and cost from infrastructure is what both solutions do best.

Desktop virtualization is a goal of many IT departments who want to reduce the costs and management that come with traditional desktop management. Earlier, traditional VDI (virtual desktop infrastructure) solutions have proven to be overly complex because they have relied on legacy server virtualization architectures. That complexity negates many of the costs and management savings promised by VDI.

Part of our goal in delivering a VDI solution combining Workspot and Scale Computing was to provide the right size solution for any organization and provide plenty of room for growth. We validated Workspot of a 3-node HC1150 cluster and were able to successfully run 175 desktop VMs using LoginVSI as a benchmark. This small cluster configuration confirmed that this VDI solution could provide high performance and high VM density at a low price with plenty of room to scale up. We also successfully validated a 3-node HC4150 cluster with 360 desktop VMs for larger configurations.

HC3 and VDI 2.0 accelerate IT's ability to deliver applications and services to users while requiring fewer operational resources. The hyperconverged and cloud-based architectures reduce risks by eliminating single points of failure and increasing availability and accessibility of both infrastructure and applications. The combined solution reduces costs through architectural and operational simplicity, reliability, and availability.

VDI is within your reach but don't get trapped by the pitfalls of complexity and cost in traditional VDI architecture. Combine the innovation of HC3 hyperconvergence with VDI 2.0 to deliver a modern workplace experience and increase productivity through efficiency.

Why Workspot and Scale Computing?

- Workspot CEO is the former General Manager for Citrix XenDesktop and XenApp, CTO is the Founding Engineer and first to code the VMware View VDI product
- Scale Computing is the leading provider of hyperconverged infrastructure in the SMB market with over 5,500 clusters deployed
- Workspot has been in production, commercial use for over 3 years
- Scale Computing was founded in 2008 and has been shipping hyperconverged infrastructure since 2012 to over 1500 customers
